

SELF-OPENING WASTE BIN MANAGER

ABSTRACT

A waste bin manager for housing at least one waste bin in a cabinet having a door includes a first elongated slide, which is adapted to be mounted within the cabinet, and a
5 second elongated slide adapted to be mounted within the cabinet. The second elongated slide is spaced apart from and oriented generally parallel to the first elongated slide with a wire harness positioned between, and attached to, the first and second elongated slides, with the wire harness adapted to hold a waste bin. A clip is attached to the wire harness with a spring having a first end attached to the clip and a second end attached to the cabinet. The spring is
10 adapted to pull against the wire harness such that the first and second elongated slides, as well as the wire harness and door, are pulled at least partially out of the cabinet when the cabinet is opened.
